

Job Title: GET - AI Engineer
Location: Hyderabad
Reporting: Head - PMO
Company Link: (www.myhomeconstructions.com)

About the Opportunity

We are a leading Construction organization specializing in high-rise building projects. As part of our digital transformation initiatives, we are looking for AI Engineers who can work across domains in automation opportunities and build AI-driven solutions. This role is suited for individuals who can analyze real-world construction-based challenges and develop AI-based solutions that integrate into business workflows.

Role & Responsibilities

The AI initiatives department will serve as a key driver of digital transformation across the organization by enabling intelligent automation and data-driven decision-making. This role involves working closely with cross-functional teams to identify opportunities, design AI solutions, and deploy systems that integrate seamlessly into business workflows. The role requires a strong balance of problem-solving, technical execution, and system integration, with a focus on building scalable AI applications that deliver measurable impact across multiple domains.

Key Responsibilities

1. Gen AI Application Development

- Design and build applications using Large Language Models (LLMs) for enterprise use cases
- Develop and optimize Retrieval-Augmented Generation (RAG) pipelines using internal data sources
- Prompt engineering and evaluation strategies to improve output quality, reliability, and consistency

2. Agentic AI & Workflow Automation

- Design and develop agent-based systems capable of executing multi-step business workflows
- Build AI Agents for different tasks and workflows, integrate agents with tools, APIs, and enterprise systems to enable end-to-end task execution

3. Problem Identification & Use Case Development

- Work with cross-functional teams to identify high-impact opportunities applying GenAI and agentic AI.
- Translate business challenges into structured AI solutions with clear objectives and measurable outcomes.

4. Deployment, Monitoring & Optimization

- Deploy AI applications in production environments in cloud platforms
- Monitor system performance, latency, and output accuracy
- Continuously refine models, prompts, and agent workflows based on real-world usage

5. Collaboration & Adoption

- Collaborate with business, operations, and technical teams to drive adoption of AI solutions
- Communicate AI capabilities and limitations clearly to stakeholders
- Support scaling of successful AI implementations across multiple business functions

Qualifications & Skills

Education: Bachelor's degree in Computer Science (CSE), AI & ML, or an equivalent discipline.

Year of Experience: 0-1 years (Recent Graduates are encouraged to apply).

Core Competencies:

- **Machine Learning & AI Foundations:** Strong understanding of core ML concepts (regression, classification, basics of neural networks) with hands-on project experience.
- **GenAI & LLMs:** Familiarity with Large Language Models (GPT, Llama, etc.) and ability to build simple applications using APIs.
- **RAG:** Basic understanding of Retrieval-Augmented Generation and exposure to vector databases (ChromaDB, Pinecone, etc.)
- **Agentic AI:** Understanding of agent-based workflows (multi-step reasoning, tool usage) with ability to implement simple agent pipelines.
- **Python & Backend:** Good proficiency in Python with basic experience in building APIs (FastAPI / Flask).
- **Data Handling & Databases:** Understanding of working with structured and unstructured data, with basic knowledge of SQL/NoSQL databases
- **Cloud & Deployment Basics:** Familiarity with deploying applications on cloud platforms, on-premises environments, and exposure to tools like Docker
- **Prompting & Evaluation:** Understanding of prompt design and basic evaluation of LLM outputs for quality and reliability
